InternApplier — CLI Command Manual

Unified Ecosystem: Intelligent Cold Mailing Agent + 1-Page ATS Resume Builder

Candidate: Chirag Janbandhu (3rd-Year Undergraduate, IIT Kharagpur) — Target: Remote Data Intern

System Architecture Overview

The **InternApplier** ecosystem connects two automated AI modules:

1. **Cold Mailing Agent** (`ColdMailingAgent/`): Automatically parses 660+ founders/leads from the GES Mastersheet (Unicorns & Soonicorns), conducts deep company intelligence to discover technical challenges, writes human cold emails without AI clichés, and schedules daily outreach strictly between **7:00 AM and 9:00 AM**.
2. **Resume Builder** (`Resume_Builder/`): Compiles strictly 1-page, ATS-optimized PDF resumes tailored via Gemini using the **Google XYZ Formula** (*Accomplished [X], as measured by [Y], by doing [Z]*), and attaches them directly to outgoing recruiter emails.

Cold Mailing Agent — Command Line Reference

Navigate to the directory before running:

```
cd F:\Intern\InternApplier\ColdMailingAgent
```

1. Dry Run / Preview Mode (`--dry-run`)

Command:

```
python mail_agent.py --dry-run
```

What it does:

- Randomly selects 5 unsent contacts across Unicorns and Soonicorns.
- Researches each company's domain, core platform, and specific data/ML challenges.
- Generates a human-sounding cold email draft connecting your IIT Kharagpur projects (FraudSentinel / Time-Series) for a **remote data intern** role.
- Compiles and links the tailored 1-page PDF resume.
- **Safety:** *No emails are sent in this mode. Perfect for previewing output.*

2. Automated Daily Scheduler Daemon (`--schedule`)

Command:

```
python mail_agent.py --schedule
```

What it does:

- Runs continuously in the background as an automated daemon.
- Automatically activates every morning during the **7:00 AM – 9:00 AM** sending window.

- Randomly shuffles the unsent contact pool and sends **15 to 20 emails daily** with anti-spam jitter (3–7 minutes delay between emails).
- Once the daily quota is reached (or at 9:00 AM), it sleeps automatically until the next morning at 7:00 AM.
- Records all sent emails in `logs/email_log.csv` so no contact is ever emailed twice.

3. Send Immediate Batch (`--now`)

Command:

```
python mail_agent.py --now
```

What it does:

- Bypasses the 7:00 AM – 9:00 AM time check and immediately sends today's batch of 15–20 random emails with safety jitter.

4. Live Test Email to Yourself (`--test <email>`)

Command:

```
python mail_agent.py --test cjanbandhu6@gmail.com
```

What it does:

- Performs live company research on a sample tech company.
- Drafts the personalized human email and generates the tailored 1-page PDF resume.
- Sends the complete package via Gmail SMTP to your test email inbox so you can review formatting and attachments.

5. Targeted Outreach to a Specific Recruiter (`--company`)

Commands:

```
# 1. Preview draft for a specific company:
python mail_agent.py --company "Razorpay" --poc-name "Siddharth" --poc-email "siddharth@razor

# 2. Send immediately:
python mail_agent.py --company "Razorpay" --poc-name "Siddharth" --poc-email "siddharth@razor
```

What it does:

- Performs instant company intelligence on the specified company.
- Tailors the email and 1-page resume specifically for that company, and sends it directly.

6. Campaign Metrics & Statistics (`--stats`)

Command:

```
python mail_agent.py --stats
```

What it does:

- Displays total contacts parsed (661), unique companies (374), total sent, and pending contacts.

Resume Builder — Command Line Reference

Navigate to the directory before running:

```
cd F:\Intern\InternApplier\Resume_Builder
```

1. Build Tailored Resume from Job Description (`--jd`)

Command:

```
python scripts/build_resume.py --jd "path/to/job_description.txt" --company "Google"
```

What it does:

- Parses the job description, matches relevant master projects/experiences, applies the default **4-Stage Google XYZ Surgeon** prompt, compiles a strict 1-page PDF, and runs 3 ATS scanner engines.

2. Select Tailoring Strategy (`--prompt`)

Command:

```
python scripts/build_resume.py --jd "jd.txt" --prompt "google_xyz_surgeon"
```

Available prompt IDs:

- `google_xyz_surgeon`: 4-Stage ATS & Google XYZ Formula (Default)
- `star_metrics`: STAR Method + High Quantified Business Metrics
- `ats_keyword_focus`: Aggressive ATS Keyword Matching
- `concise_high_signal`: Fast-Skim Crisp One-Liners

Interactive Web UI Reference

Start the local server:

```
python web_ui/app.py
```

Open `http://127.0.0.1:5000` in your browser to access:

1. **1-Page Resume Builder Tab**: Live JD tailoring, interactive prompt selector, and 3-engine ATS Score Card.
2. **Cold Outreach Tab**: Searchable GES Mastersheet recruiters, 1-click company intelligence, human email editor, and 1-click delivery.
